***Your innovative partner for  
electrical installation materials***

## Success comes from experience

Since being founded over 85 years ago, Heinrich Kopp GmbH has made a name for itself as a specialist for the manufacture of switch ranges, electro-technical products and electrical installation materials. Today, our rapidly growing company is one of the leader manufacturers of high-quality electrical installation products for sophisticated projects. In addition to products manufactured with our own production facilities, we also carry brand-name products from high-profile manufacturers. Our broad product range includes more than 5,000 products. We therefore offer everything needed for electrical installation work. From classic plugs to flexible power distributors up to and including an innovative RF system, we are capable of supplying international customers with everything they need.

In addition to a first-rate supplier for standard products, we are also your tried and test partner when it comes to highly complex, tailored solutions. With the product innovations PERCEDOS®, a fault current circuit breaker for portable electrical applications as well as the glass sensor switch HK i8, we offer the market sophisticated solutions that meeting the most stringent requirements.

Kopp GmbH offers its products through two sales channels: The Professional product line is sold exclusively in specialist and wholesale outlets while the DIY product line is sold in hardware stores. Thanks to our international sales organisation and modern logistics, we are always able to reliably and quickly supply both domestic and international customers.

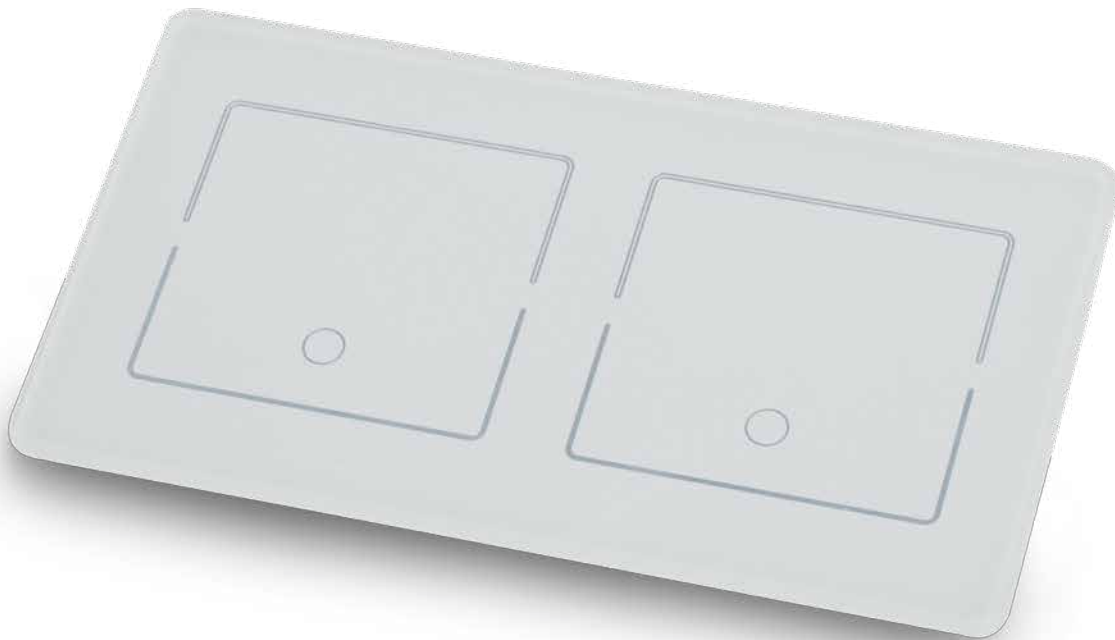

## **NEW – the HK i8 glass sensor switch**

The use of glass as a design element is currently very widespread and perfect for creating visual highlights. As one of a handful of companies carrying glass sensor switches, Kopp offers a complete product range from switches up to and including dimmers. Our innovative glass sensor switches can be easily integrated in existing installations making them the number one choice for new buildings, but also for the renovation and refurbishment market. Basic and multi-product combinations can be installed in existing standard flush-mounted sockets. This eliminates the need for costly rewiring.

### **Product facts**

- complete product range from switches up to and including dimmers
- multi-product combinations suitable for standard switchboxes
- for new buildings as well as the renovation and refurbishment market
- touch-sensitive switches
- modern design
- reliable technology and simple installation

## Quality, German-manufactured products

A wealth of experience and extensive industry expertise are the basis for our continual growth. Our worldwide team of nearly 500 employees, approximately 270 of whom work in Germany, are highly qualified and undergo continual training. Since 1952, we have trained employees both for industrial and commercial careers.

At its plant in Kahl, Kopp has manufactured products that meet the highest standards since 1956. Today, the plant is equipped with fully automated production facilities. Quality made in Germany – our team is committed to this standard, a goal it has set for itself. We continually inspect all products and processes to identify any potential for further optimisation. Our product development department, test laboratory and quality management work closely with one another to ensure seamless compliance with these high standards. There's good reason why Kopp has been certified in accordance with the strict standards of DIN EN ISO 9001 for over 20 years.

## NEW – The PERCEDOS® E-Mobility Protective Switch

Electro-mobility is becoming increasingly important as an environmentally-friendly alternative. Reliable connection, communication and safety technology is an essential prerequisite for the expansion of e-mobility. Proper protective switches are needed in order to „fill up“ with electricity. In cooperation with a leading automotive manufacturer in Germany, Kopp has developed the PERCEDOS® mk6 protective switch – a portable protective device (IC-RCD). The device checks the power supply for proper function and only allows power to be drawn from a safe power source. PERCEDOS® mk6 makes it possible to charge a vehicle with an AC power supply (1-phase with 16 A at 230 V) at any time without any problems. As an OEM supplier, Kopp fulfils the high standards of the automotive industry. Innovative, tailored solutions are of crucial importance particularly in this area. As a competent partner, Kopp is happy to respond to specific customer requirements.

### Product facts

- Fault current circuit breaker (RCD)
- Conductor monitoring (PCM – protective conductor monitoring)
- Detection of hazardous voltage on the protective conductor
- Graphic user interface
- Parameterisation interface
- Thermal monitoring
- Power failure monitoring
- Function displays
- Integrated vehicle communication

Wendland offers global door to door logistics solutions and tailor made concepts for every transport task.

Order Management, Supply Chain Solutions and Quality Control belong to our comprehensive service scope worldwide.
