Benefits at a glance

→ Compact design

→ Versatile mounting options

→ Modular expandability

→ Simple and direct connection

→ GST18® plug-in connection system from Wieland

→ Suitable connection and supply cables for flexible and safe power distribution

Kopp

A fresh start with Blue-control and the Smart Home app from Meshle

Blue-control – The future of living is smart!

A fresh start for your smart home

We're getting your home ready for the future. With Meshle and a new app, we're offering more security, full compatibility and innovative features – simply smarter living!

What does that mean exactly?

Blue-control: We're starting with a revamped and slightly reduced product range. The Blue-control 2-wire universal dimmer and the home server are being discontinued.

Find out more about Blue-control on our website www.kopp.eu

Smart Home App: Our Kopp Home-Connect app will be replaced by the manufacturer-independent 'Meshle' app. This app can be used not only with our Blue-control and Smart-control products, but also with other integrated smart home devices from other manufacturers that use Bluetooth technology. Thanks to the familiar operation of the Home-Connect app, the transition is effortless. In addition, advanced functions, greater convenience and even more intuitive control are available.

Existing customers: Customers who have already installed the Kopp Home-Connect app can continue to use it as usual. Once integration with Meshle is complete, we will proactively inform our customers about the switch to the new app.

What's next?

→ Integration of our switches, sensors and actuators into the Meshle app with all functions and features

→ Provision of a device list with compatible products from other manufacturers

→ Sales documents and additions to the product range, including the switchable flush-mounted socket.

→ Resumption of new product developments such as adapters and uni-transmitters
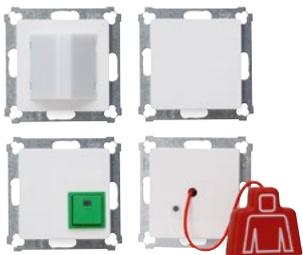

Follow us and stay up to date!
You can find our press releases on social media, in trade media, on the Kopp website and in our newsletter.

The new 'Meshle' app makes Kopp's smart home range even smarter!

Nurse call system

Toilet emergency kit
Article No. 450002016

Barrier-free toilets are mandatory in public buildings. These toilets must be equipped with a call system.
A special toilet emergency call set is available for this application, which can be supplemented with additional accessories as required.
The toilet emergency call set contains a pull switch, mains rectifier (power supply), stop button and signal light.

Find out more about the product on our website www.kopp.eu

UPS
Article No. 450302015

The UPS ensures that the system continues to function in the event of a power failure, as required by DIN VDE 0834. Specially developed for projects where no UPS is available on site. Installation in a switch box eliminates the hassle of finding a suitable mounting location. The signal line indicates when the UPS is active and when the battery is defective.

Find out more about the product on our website www.kopp.eu

Battery changing set for UPS
Article No. 450402018

DIN VDE 0834 requires the annual replacement of wear parts such as batteries and rechargeable batteries. The replacement set allows for easy replacement using two screws and a plug connection.

Find out more about the product on our website www.kopp.eu

All components of the nurse call system/toilet emergency call system, including the mains rectifier, are designed for installation in flush-mounted switch boxes in accordance with DIN 49073 and are supplied complete with cover and single frame in HK07 pure white design.

Our new products in the system!

NEW!

Call button
Article No. 451102010

Functions:
→ Call/emergency call activation via red button
→ Locator light or reassurance light (red)

NEW!

Duty room terminal
Article No. 450202012

The duty room terminal is used for the selective display of calls from several accessible toilets in plain text. The message texts can be freely configured using the PC software supplied.

Functions:
→ Central notification of up to 20 calls
→ Visual and acoustic call signalling
→ Two-line display for showing call notifications
→ Configurable call texts with up to 16 characters
→ 20 galvanically isolated inputs with shared ground
→ Rest or working current evaluation
→ Suppression of the acoustic signal for 20 seconds
→ Presence button (green)
→ Short-term acoustic call suppression via buzzer mute button (yellow)
→ Configuration of notification texts via PC

Emergency horn
Article No. 450602014

The emergency horn serves as a signal transmitter for dry and damp rooms.

It is suitable for connection and retrofitting to the system's call module as well as for continuous operation.

NEW!

Duty room unit
Article No. 450102019

Functions:
→ Presence marking via presence button (green)
→ Presence lamp (green)
→ Sound generator for acoustic call forwarding
→ Short-term acoustic call suppression via buzzer mute button (yellow) for 20 seconds
→ LED indicator lamp (red)

Presence Detectors

Automated switching and dimming of lights

With presence detectors from Kopp, lighting can be switched and dimmed intelligently and automatically depending on the ambient brightness and the presence of people.

Built-in infrared sensors register heat radiation when a person enters the active detection area and switch or dim the connected lighting. In addition, active light measurement ensures that the lighting remains or is automatically switched off as soon as there is sufficient daylight in the detection area.

DALI-2 presence detector

The DALI-2-certified presence detectors with integrated DALI application controllers are used to control digital, dimmable ballasts.
DALI stands for 'Digital Addressable Lighting Interface', is a manufacturer-

independent interface and is used for energy-efficient lighting control. Kopp DALI-2 presence detectors operate using the broadcast method. Corresponding electronic ballasts for the light sources are controlled collectively.

Presence detectors with switching output

If dimming of the light is not required, presence detectors with a switching output are used – either with one or two switching outputs. In the case of presence detectors with two outputs, light is switched at one output and heating, air conditioning or ventilation (HVAC) at the other output as required.

Find out more about presence detectors on our website www.kopp.eu

The **Kopp DALI app** allows you to easily and reliably configure the presence detectors via Bluetooth®.

For a comfortable indoor climate

HK07 room temperature controller "NC contact"

IAs part of the ongoing development of our product range, we now offer new 'normally closed' room temperature controllers in the established 55×55 size. With this product expansion, we offer a significantly wider selection of design and colour options that harmonise perfectly with the HK07 switch range. This allows installations to be even better adapted to different room concepts in terms of design.

Another advantage of the 55×55 format is its cross-manufacturer compatibility. The new room temperature controllers can therefore also be integrated into switch ranges from other brands, which makes planning and implementing installations noticeably easier.

Reliable, robust and safe!

Rubber plugs and couplings for demanding applications!

New and contemporary

Our plugs and couplings are ideal for many areas of application – whether in the workshop, on the construction site or in the garden. Thanks to their robust rubber design, they can withstand even harsh conditions and ensure maximum safety.

Benefits at a glance

→ 16 amps – for strong performance

→ 230 V – perfect for standard power supply

→ 1.5 mm² – optimum cable cross-section for stability

→ Rubber – resistant, robust, durable
